

“GVE input is welcomed by CEMAR”

Thank you GVE Commercial Solutions

CEMAR posted this “thank you” to our GVE experts who were invited by CEMAR to offer guidance and advice about enhancing and improving their system.

NEC4® is an evolution of NEC3, with much of the change driven by user feedback. CEMAR is similarly evolving. Following successes on infrastructure projects, we are particularly interested in how CEMAR can assist the Building sector in their continued uptake of NEC. We were pleased to host a recent visit by GVE Commercial Solutions, who suggested various system enhancements to workflow, contextual help and NEC4 related changes. We welcome this feedback and will act on it, as we aspire to be the leading contract management system across all sectors.

GVE’s practical and detailed knowledge of actual NEC usage, as it is being used by the industry, offered invaluable insights that have made it possible to increase the effectiveness of CEMAR’s systems. CEMAR continues to develop a class leading product and its investment in the knowledge and skills of industry experts is to be commended.

Both GVE and CEMAR will be continuing this collaboration.
